

2119

Family Lactariidae

Body oblong, rather deep. Head with lower profile little more inclined. Snout pointed. Eye high, lateral. Mouth cleft deep, oblique. Teeth small in jaws, 1 or 2 pairs of canines in front. Preopercle edge entire. Gill openings wide, membranes not united, free from isthmus. Gill rakers lanceolate. Pseudobranchiae present. Branchiostegals 7. No deep notch on shoulder girdle inside gill opening. Peritoneum pale. Vertebral 24 of which 14 caudal. Upper surface of head with large muciferous cavities. Scales moderately small. Lateral line continuous. Air bladder bifurcate both anteriorly and posteriorly.

Pyloric appendages 6. Two dorsal fins, spinous fin feeble, Anal with 3 feeble spines. Caudal moderate. Pectoral rather low. Ventral small.

One genus.

Genus Lactarius Valenciennes

Lactarius Valenciennes, Hist. Nat.

Poiss., vol. 9, p. 237, 1833. (Type

Scomber lactarius Schneider,

monotypic.)

Platylopes Swainson, Nat. Hist. Animals, vol. 2, p. 247, 1839.

(Type Scomber lactarius Schneider, monotypic.)

Body deepest forward, well compressed. Head moderate, compressed. Snout conic. Eye large, little advanced in head. Maxillary reaches below eye. Teeth small, curved, pointed in jaws, upper in villiform band with 1 or 2 pairs of canines near symphysis and lower uniserial, with pair or large single canine anteriorly. Small teeth on vomer, palatines and tongue. Scales

Genus Pama, new genus

Japan Bola pama Buchanan-Hamilton.

Elongately ovoid, narrowing to slender caudal peduncle. Snout short. Eye small, advanced. Mouth oblique, lower jaw little shorter. Teeth in villiform bands in jaws, outer upper and lower inner rows little enlarged. Preopercle crenulated, with distinct denticles at angle in young. Scales small, cycloid on head, ctenoid on body. Lateral line with enlarged scales. Spinous dorsal with 10 spines, fin small, and soft with long base, rays 40 to 43. Anal with 2 spines and 7 rays. Caudal carneate. Pectoral long as head, ventral much shorter.

Diagnosis. Known by its very long dorsal fin, base of which nearly half body length without caudal, also by

A. II, 10 or 11, spines weak, second 5, first ray $2\frac{4}{5}$; caudal $1\frac{1}{3}$, rounded to cuneate; least depth of caudal peduncle $3\frac{1}{4}$; pectoral $1\frac{1}{2}$; ventral $1\frac{3}{5}$.

Grayish above, golden below. Five or 6 rows of black spots along body and caudal fin. Other fins grayish marginally. Young with body gray, fins except whitish caudal black. Reaches 405 mm.

♂ (Cuvier.)

India, Burma, Pinang, Malayan Peninsula, Singapore, East Indies. According to Bleeker reaches 420 mm.

Peninsula; Singapore).

Lactaria delicatulus Bleeker,
Act. Soc. Sci. Ind. Neerl., vol. 3, no.
9, p. 2, 1857-58 (Padang, Sumatra).

Depth $5\frac{1}{8}$; head $3\frac{1}{2}$. Snout $4\frac{1}{2}$ in head from snout tip; eye 6 to 7, $1\frac{1}{4}$ to $1\frac{1}{3}$ in snout, $1\frac{1}{2}$ in interorbital; maxillary reaches $\frac{2}{3}$ in snout or opposite hind eye edge, length $2\frac{1}{2}$ in head from snout tip; pair of long front canines in each jaw; band of upper villiform teeth with outer conic curved row, below wide set, conic, pointed teeth along sides of mandible; interorbital low; preopercle edge spinate in young, crenulate to entire with age.

Scales cycloid, 95 rows along above lateral line, 85 along below; 14 scales above, 26 below. Lateral line arched forward, straight above middle of anal.

D. IX or X, I, 30, fifth spine $2\frac{4}{5}$ in total head length, first ray 3;

Lactarius burmanicus Lloyd, Rec.
Indian Mus., vol. 1, pp. ²²⁷ 229, ^{fig. 1} 1907 (type
locality, Akyab).

soft dorsal with 1, sometimes 2,
longitudinal brown bands basally,
anal with 1; caudal with 4 or 5 deep
brown bands transversely, usually
as spots on membranes.

East Indies, Philippines.

Depth $2\frac{3}{4}$ to 3; head $2\frac{1}{2}$ to 3,
 width $2\frac{2}{3}$ to 3. Snout $3\frac{2}{3}$ to 4
 in head from snout tip; eye
 $3\frac{1}{3}$ to 5, greater than snout in
 young to equal with age, greater
 than interorbital in young to
 $1\frac{1}{5}$ in interorbital with age;
 maxillary reaches $\frac{1}{2}$ to $\frac{2}{5}$ in eye,
 expansion $1\frac{1}{6}$ to 2 in eye, length
 2 to $2\frac{1}{8}$ in head from snout tip;
 interorbital $3\frac{2}{3}$ to 4, convex.
 Gill rakers 3+12, lanceolate,
 little longer than gill filaments
 or 2 in eye.

Scales 70 to 80 in lateral
 line. Scales very caducous.
 Lateral line little high at first,
 slightly inclined, median at
 caudal base.

D. I, VII or I, VIII, 20 to 22, second

spine $2\frac{3}{5}$ to $3\frac{1}{3}$ in total head length, first branched ray $2\frac{2}{5}$ to $2\frac{3}{5}$; ca. III, 25 to 28, third spine $4\frac{2}{3}$ to 5, first branched ray $2\frac{1}{4}$ to $2\frac{1}{2}$; caudal $1\frac{1}{4}$ to $1\frac{2}{5}$; least depth of caudal peduncle $3\frac{4}{5}$ to $4\frac{1}{6}$; pectoral 1 to $1\frac{1}{8}$, rays II, 15; ventral I, 5, fin $2\frac{1}{4}$ to $2\frac{4}{5}$ in total head length.

Brown on back, sides and below silvery white. Iris silvery white. Deep brown blotch about size of pupil on opercle above and another at upper end of opercular flap. Fins pale, dorsals and caudal tinged brownish.
